

N-Layer Design with Microsoft ASP.NET 3.5 – v2

1 N-LAYERED WEB APPLICATIONS WITH ASP.NET 3.5 PART 1: GENERAL INTRODUCTION	3
1.1 INTRODUCTION	3
1.2 A LOOK AHEAD	4
1.3 A QUICK LOOK AT THE INITIAL AND AT THE NEW DESIGN	4
1.3.1 Shortcomings of the Initial V1 Release	5
1.3.2 What's New in vNext	6
1.4 APPLICATION SETUP	7
1.5 APPLICATION DESIGN	9
1.5.1 Spaanjaars.ContactManager.Web	11
1.5.2 Spaanjaars.ContactManager.BusinessEntities	11
1.5.3 Spaanjaars.ContactManager.Bll	13
1.5.4 Spaanjaars.ContactManager.Dal	15
1.5.5 Spaanjaars.Validation	16
1.6 SUMMARY	16
2 N-LAYERED WEB APPLICATIONS WITH ASP.NET 3.5 PART 2: INTRODUCING THE VALIDATION FRAMEWORK	18
2.1 INTRODUCING VALIDATION	18
2.1.1 Validation in the Presentation Layer	18
2.1.2 Validation in the Database	19
2.1.3 Validation in the Business Layer	19
2.2 INTRODUCTION TO THE VALIDATION FRAMEWORK	20
2.3 DESIGN OF THE VALIDATION FRAMEWORK	20
2.3.1 From the Attributes Class to the Validate() Method to the BrokenRules Class	22
2.3.2 The ValidationBase Class and the Validate Method	23
2.3.3 The ValidationAttribute base class	24
2.3.4 Creating Custom Validation attributes	25
2.3.5 The BrokenRule and BrokenRules Classes	27
2.4 PUTTING IT ALL TOGETHER: A VERY SIMPLE PERSON CLASS AND A BUNCH OF UNIT TESTS	28
2.5 SUMMARY	31
3 N-LAYERED WEB APPLICATIONS WITH ASP.NET 3.5 PART 3: ADVANCED VALIDATION TOPICS	32
3.1 IMPLEMENTING CUSTOM BUSINESS RULES	32
3.1.1 Overriding Validate() to Implement Your Own Rules	32
3.1.2 Taming the BrokenRules Collection	33
3.2 VALIDATE(): A METHOD OR A PROPERTY?	34
3.3 LOCALIZATION OF VALIDATION MESSAGES	34
3.4 VALIDATION IN THE CONTACT MANAGER APPLICATION	37
3.5 SUMMARY	38
4 N-LAYERED WEB APPLICATIONS WITH ASP.NET 3.5 PART 4: SORTING, PAGING AND FILTERING	39
4.1 SORTING	39
4.1.1 Introduction to List<T> and Collection<T>	41
4.1.2 Sorting with a Class that Inherits from IComparer<T>	43
4.1.3 Putting it all Together: a Simple Unit Test for Sorting	44
4.1.4 Sorting in the ContactManager application	46
4.2 PAGING	47
4.2.1 Client Side Paging	47
4.2.2 Business Layer Paging	48
4.2.3 Database Paging	50
4.2.4 Database Paging and Sorting Combined (or the Lack Thereof)	52
4.2.5 Paging in the ContactManager Application	52
4.3 CUSTOM FILTERING USING A CRITERIA OBJECT	53
4.3.1 The Criteria Class	53
4.3.2 Overloads of GetList in the Bll and Dal namespaces	54
4.3.3 The Stored Procedure to Search for Contact People	54
4.3.4 Creating an Instance of the Criteria Class in the ObjectDataSource	55
4.3.5 Filtering in the Contact Manager Application	55

4.4	SUMMARY	55
5	N-LAYERED WEB APPLICATIONS WITH ASP.NET 3.5 PART 5: DEALING WITH CONCURRENCY.....	57
5.1	HANDLING CONCURRENCY AT THE DATABASE LEVEL	57
5.2	HANDLING CONCURRENCY IN THE BLL AND DAL NAMESPACES	59
5.2.1	Changing the BusinessBase Class	59
5.2.2	Changing the Individual Cal Classes	59
5.3	HANDLING CONCURRENCY IN THE UI OF THE CONTACT MANAGER APPLICATION.....	59
5.4	SUMMARY	60
6	N-LAYERED WEB APPLICATIONS WITH ASP.NET 3.5 PART 6: SECURITY.....	61
6.1	DATABASE SECURITY	61
6.2	URL AUTHORIZATION IN ASP.NET	61
6.2.1	Enable ASP.NET Membership and the RoleManager	62
6.2.2	Creating Users and Roles using the WSAT or the CreateUserWizard.....	63
6.2.3	Control Access to Files in Web.config.....	64
6.2.4	Allow Users to Login.....	64
6.3	DECLARATIVE ROLE BASED SECURITY	64
6.4	IMPERATIVE ROLE BASED SECURITY	65
6.5	CREATING ADAPTIVE UI'S WITH MEMBERSHIP AND ROLEMANAGER	66
6.6	SECURITY IN THE CONTACT MANAGER APPLICATION	66
6.7	SUMMARY AND WRAPPING UP	67
